PACKAGE MADE
OUT OF TWO OR MORE
LAMINATED FOILS

eniShape® is done with **state-of-the-art** machines and by highly-trained staff. In **Eniter** we can produce a package with an easy-to-open system that does not allow for the barrier properties to be lost.

The purpose of eniShape® is to let the extra air out of the packaging, streamlining the space used for transportation. It is compatible with materials designed to pack food that need transpiration.

®(System registered in the Spanish Patent and Trademark Office).

In order to ease the opening of our packages, **Eniter** has developed eniShape®, an own-designed, easy-to-open system, which keeps the sealing of its content and allows a simple opening by means of a **precut that can draw any figure**.
