VERSATILE, VISIONARY,

Flexible tray filling system for round fruit

The Jollypack Vario is a compact and flexible packaging machine for round fruit that has been specially developed for modern production lines. It is suitable to fill both trays with and without flaps, which significantly increases flexibility. The compact design and small footprint allows for a simple integration into limited production areas and improves the use of space.

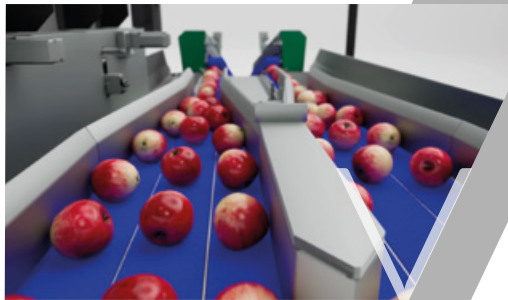

Automatic format conversion ensures quick changeover between packaging types without manual intervention, which increases efficiency. The ergonomic design reduces the physical strain on operators and ensures comfortable handling.

Thanks to its versatility, the Jollypack Vario optimally meets the requirements for efficiency, flexibility and quality in fruit packaging.

The Jollypack Vario is compact, with a total length of 3 metres, making it ideal for space-saving integration into production lines.

JOLLY

VARIOCONVOY

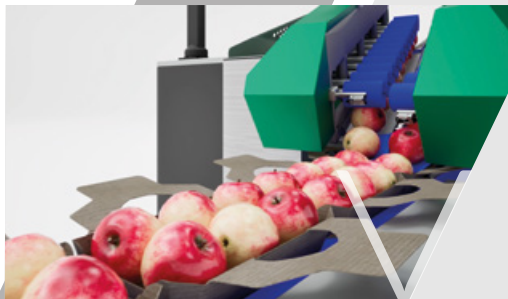

Processes gently even 2 calibres

The VarioConvey ensures careful transport of fruit without damaging it. Different calibres are precisely conveyed and safely placed. The system reduces collisions and increases sales due to more product enhancement and reducing the "give away".

TRAY DISPENSER

Extremely powerful for all tray types

The tray dispenser denests trays with and without flaps of any type. The special divider enables reliable removal of the trays from stacks, even with tricky materials, ensuring a smooth workflow up to 60 p/min.

SMARTFILLER

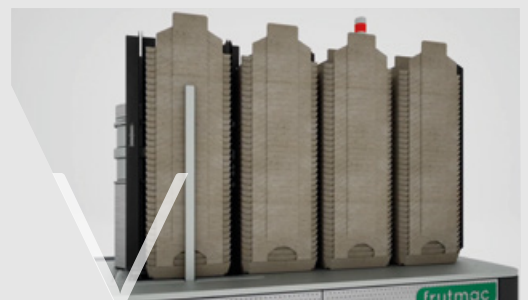

Fully automatic filling – flexible placement patterns

The SmartFiller is an automatic fruit-filling system that processes different calibres according to different patterns. The opened flaps allow ergonomic manual intervention and rotating of the fruit, which simplifies quality control and increases flexibility.

ERGONOMIC FILLING PROCESS

Front loading with high autonomy

The tray magazine is arranged at an ergonomic height of 1.30 m and directly at the operating station. The 4-stack carousel logic enables continuous filling 'on the fly', increasing efficiency and reducing the workload of the operators.

FULLY AUTOMATIC FORMAT CHANGEOVER

Click and go!

The Jollypack Vario offers fully automatic format changeover for trays, calibres and packing patterns. Programmes can be saved; the access via the touch control is very intuitive thus ensuring quick adjustment.

ACCESSIBILITY FOR TECHNICAL SERVICE

User-friendly, illuminated interior space

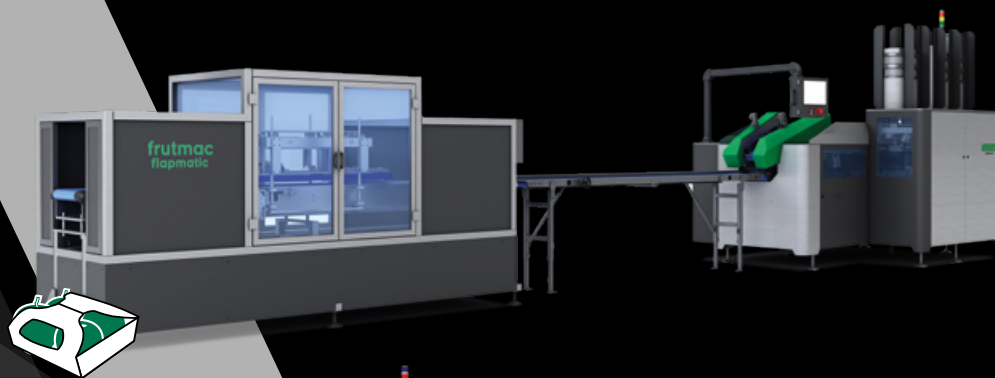

Thanks to the suspended switch box and Plexiglas doors, the Jollypack Vario maintenance is particularly service-friendly. This design allows easy access for service interventions and ensures maximum safety and efficiency during maintenance operations.

Production line integration options and compatibility with other packaging machines

The Jollypack Vario system can be smoothly integrated into existing production lines, offering substantial advantages for the entire packaging process. Depending on your needs, other machines can be added down the line, such as the

Blitzmatic+ Pro, the Flapmatic series, the Stickmatic, stretch film or flowpack systems. It enables seamless automation, reduces manual intervention and ensures a higher production speed.
